

11

a work piece positioning system for positioning at least one
of the first or second work pieces in relation to the
measurement system and/or the beam axis; and
a laser controller for directly or indirectly implementing
the first and second processing recipes associated with
the measurement values of the characteristics through 5

12

direct or indirect control of one or more of the laser
system, the beam delivery system, or the work piece
positioning system to create the features with the prede-
termined attributes in the first and second work pieces.
